SAFCO

FG Diamonds

4.3

With lasting sharpness, efficient cutting performance, and a wide variety of sizes, shapes, and grits, these diamonds provide an ideal solution for even the most challenging preps

Having a rough day? Sometimes, it helps to hear about a colleague whose day might have been even more difficult, such as Dr. Varo Boyer, who asked DPS to "imagine the difficulty" of a particularly challenging procedure. The patient: An extremely anxious gagger with a large tongue and "chubby" cheeks. The mission: Getting into the prep for a crown on tooth No. 2.

Thanks to Safco's FG Diamond Burs, Dr. Boyer not only accomplished this mission but did it while "minimizing prep time, improving patient comfort, and improving my mental health." Precision crafted in Switzerland from carefully selected natural diamond crystals, these reusable diamond burs are engineered for reliable, consistent, and long-lasting cutting efficiency, with a wide assortment of sizes, shapes, and grits that offer solutions for even the most challenging dental missions.

Dr. Boyer was more than pleased with the FG Diamonds that he said are "sharp and cut quickly and efficiently." He added, "I am now more confident and quick with my preps" and even managed to impress a student observer, who was "shocked to see a true 5-minute crown prep."

Variety of Sizes, Shapes, & Grits

The Safco FG Diamonds are available in almost any shape imaginable, in several sizes, and in grits from fine to extra coarse, with burs color-coded by grit. For this product review, each dentist chose up to 10 burs to use for the trial period.

Describing the variety of shapes as "fantastic," Dr. Carolyn Shreck explained, "With so many bur shapes and sizes in different grits, I easily found an option for even the hardest angles to prep." Dr. Kane Fulton said, "The variety of shapes and sizes allowed me to cut an uprighted prep on a rotated

and mesially-inclined tooth." Noting that she "liked the really coarse burs for quick preps," Dr. Victoria Spindel Rubin suggested "some short diamonds for people who can't open wide."

Cutting Efficiency & Sharpness

Made with high-quality, high-density, fine-grade materials, Safco FG Diamonds offer consistent cutting performance, with excellent contact between the bur and tooth surface to reduce the likelihood of chipping and breaking. Stating that the diamonds "cut with precision and efficiency," Dr. Aisha Nasir said the "excellent cutting ability" was her favorite feature, and Dr. Fulton called the burs "smooth and accurate." Describing the FG Diamonds as "easy to use and dependable," Dr. Ami Bhagat praised the "smooth, very efficient and quick prep cutting with no hand fatigue."

Commenting that the FG Diamonds stayed sharp longer than others and "cut zirconia efficiently," Dr. Spindel Rubin said, "I was confident I would get a clean, smooth cut." Similarly, Dr. Vladik Crutcher said the FG line "provided high-quality, well-shaped burs that were efficient, provided a clean and smooth cut, stayed sharp, and were long-lasting." Pleased that he did not have to "use multiple disposable diamonds to do the same job as one," Dr. Jason Dunville said, "I loved the fast cut and life of effective cutting."

takeaways

- Reusable diamonds engineered for reliable and consistent sharpness and cutting efficiency
- Wide assortment of sizes, shapes, and grits and color-coded by grit
- Made from high-quality, high-density, fine-grade materials for long-lasting durability
- Excellent contact between bur and tooth surface reduces likelihood of chipping and breaking

"With so many bur shapes and sizes in different grits, I easily found an option for even the hardest angles to prep."

—Carolyn Shreck, DDS; Raymond, NH

Durability of Diamonds

"We were using disposable diamonds and wanted a reusable solution that would be economical and more effective in preparations," shared Dr. Dunville. After using the Safco FG Diamonds, he discovered, "They cut great and we were able to get about 5 crown preparations out of the coarse grit diamonds." Previously experiencing diamonds that fail, break, or don't last, Dr. Fulton appreciated the durability of the FG Diamonds and said, "I used these diamonds multiple times and had zero failures." Pleased that she could "use the diamond over again," Dr. Spindel Rubin said, "It cut well and stayed sharp after sterilizing." For Dr. Shreck, "cutting longevity was truly excellent, even with fine grit, which usually clogs and dulls quickly." A few evaluators reported difficulty opening the packaging, and Dr. Shreck suggested putting the product information in a different location to keep it from being destroyed when opening the slide case.

Overall Satisfaction

Because of the "great variety of bur shapes and excellent cutting longevity" of the Safco FG Diamonds, Dr. Shreck said she would definitely recommend the burs to colleagues. Noting that he has already ordered the Safco FG

Diamonds to refill his stock, Dr. Dunville shared, "I had a great experience with the samples Safco provided." Dr. Nasir called them a "wonderful product that reduced procedure time," and Dr. Fulton concluded, "These burs are well

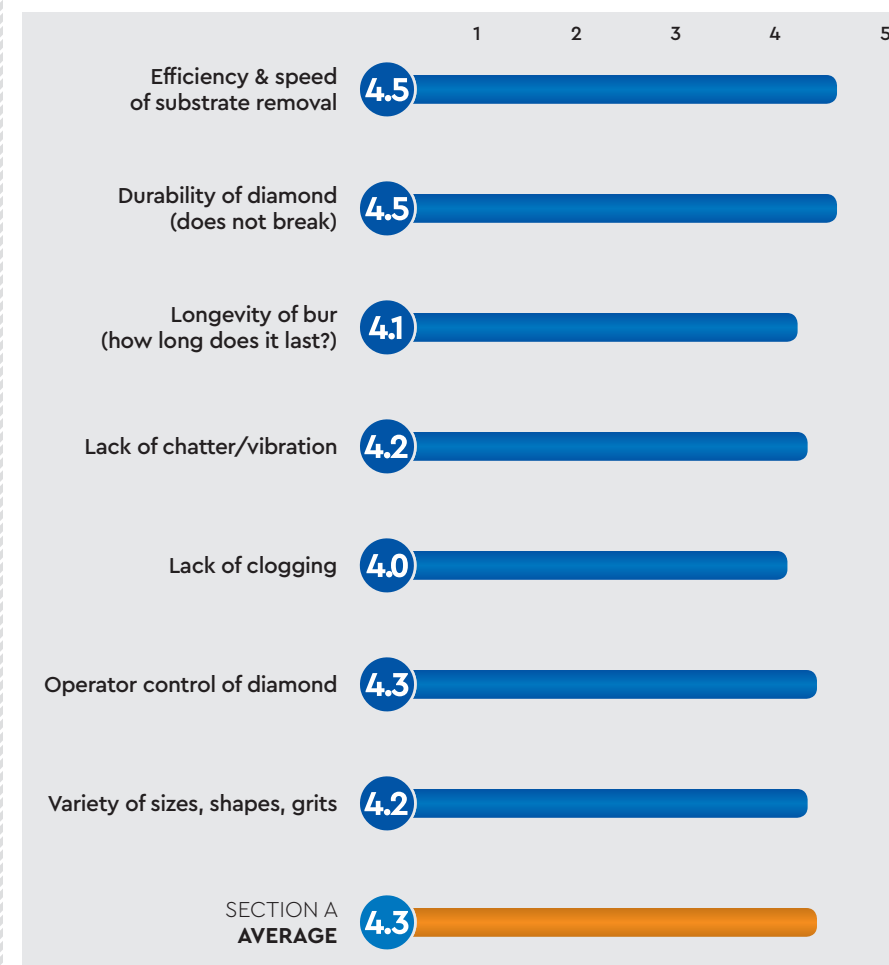

made and do a great job. I would highly recommend."
